

## Project Contributors

Sustainability is the process of gaining a clearer view of reality so that the social and environmental design we create allows all human beings to succeed. In 2008, the year the Eco Schoolhouse was conceived and realized, people from all walks of life stepped up and made the project happen. Our community is better because of the labor, ideas and support of many people.

The Eco Schoolhouse was built primarily through the generosity of people and the organizations listed below. Nearly all these organizations are local in the LEED definition of, "within 500 miles"; in fact, most of the building materials used in Eco Schoolhouse were made within about 50 miles of Grant School. That so many companies donated construction materials of considerable value, and in some cases paid their employees to work on Eco Schoolhouse, is a remarkable act of sustainable kindness.
