

# United States Postal Service

## Missouri, Illinois and Iowa

---

Peckham & Wright Architects, Inc. has completed over 300 projects located throughout Missouri, Illinois and Iowa as a part of a major repair program initiated by the U.S. Postal Service.

Many of the Post Offices offered unusual challenges. The work done varied widely depending upon the specific needs of each facility. Some repairs included new roofs, additions of entrances or docks, paving, landscaping, redesign, interior and exterior restoration, door and window replacement, lobby redesign, and accommodation for handicap accessibility.

In more extreme cases, subterranean water leakage required extraordinary measures. Double-system sump pumps, new drain tile in basement slabs, and improved site drainage were utilized to alleviate the leaking.

*The vehicle maintenance facility was a 12,000 square foot addition to the existing USPS facility in Cedar Rapids, Iowa.*
