Adrienne Stolwyk, an Intern Architect with Peckham & Wright Architects, Inc., has received LEED accreditation as offered through the U.S. Green Building Council's LEED® (Leadership in Energy and Environmental Design) program.

LEED Professional Accreditation distinguishes building professionals as having the knowledge and skills to successfully steward the integrated design and LEED certification process. As a LEED Accredited Professional (LEED AP) Stolwyk has demonstrated a thorough understanding of green building practices and principles and a familiarity with LEED requirements, resources, and processes. She is currently working on obtaining LEED certification for the Eco School House at Grant Elementary School, Columbia Fire Station Nos. 7 and 9.

The Leadership in Energy and Environmental Design (LEED) Green Building Rating System™ is the nationally accepted benchmark for the design, construction, and operation of high performance green buildings. LEED gives building owners and operators the tools they need to have an immediate and measurable impact on their buildings' performance. LEED promotes a whole-building approach to sustainability by recognizing performance in five key areas of human and environmental health: sustainable site development, water savings, energy efficiency, materials selection, and indoor environmental quality. LEED also provides a roadmap for measuring and documenting success for every building type and phase of a building's lifecycle.
